

World Scientific Series on Carbon Nanoscience

# HANDBOOK OF CARBON NANO MATERIALS

Volume 8

Characterization, Conducting Polymer  
and Sensor Applications

Editors

Francis D'Souza  
Karl M. Kadish

# Contents

<i>Preface</i>	ix
<i>List of Contributors</i>	xiii
<b>Chapter 1 Nanotube Micellar Surface Chemistry — Surfactant Surface Structure, Modification and Application</b>	<b>1</b>
<i>Navaneetha K. Subbaiyan and Stephen K. Doorn</i>	
1. Introduction .....	2
2. SWCNT Dispersion Characterization Techniques.....	4
3. Surfactant Dispersions and Structure.....	7
3.1. Sodium dodecyl sulfate (SDS).....	7
3.1.1. Effect of salt – electrostatic SWCNT model.....	8
3.1.2. Surfactant orientation and increase in PLE intensity .....	9
3.1.3. Salt induced surfactant volume changes on SWCNT surface: impact on density.....	14
3.1.4. Aggregation of SWCNTs due to salt addition .....	16
3.1.5. Computational studies of SDS structure on SWCNTs.....	19
3.2. SDBS.....	24
3.3. Bile Salts .....	26
3.4. Multi surfactant systems.....	32
4. Applications Based on the Understanding of Surfactant Structure .....	35
4.1. Density-based separations: DGU.....	37
4.2. Separations based on binding affinity: hydrogel chromatography.....	39
4.3. Separations based on relative hydrophobicity: aqueous two-phase methods .....	45
5. Conclusion .....	52
References .....	52

<b>Chapter 2</b>	<b>Printing Graphene and Carbon Nanotubes for Energy Storage and Conversion Applications</b>	<b>61</b>
	<i>Stephen Lawes, Qian Sun, and Xueliang Sun</i>	
1.	Introduction .....	61
2.	Principles of Printing Technologies .....	62
2.1	Inkjet printing.....	62
2.2	Screen printing.....	67
2.3	Transfer printing .....	68
2.4	3D printing.....	69
3.	Printing Carbon Nanomaterials.....	70
3.1	Graphene .....	70
3.2	Carbon nanotubes.....	74
4.	Energy Applications of Printed Carbon Nanomaterials .....	78
4.1	Lithium-ion batteries .....	78
4.2	Supercapacitors .....	82
4.3	Hydrogen fuel cells .....	83
4.4	Solar cells.....	86
5.	Summary and Outlook.....	88
	Acknowledgments.....	89
	References .....	89
<b>Chapter 3</b>	<b>Fullerene-based Conducting Polymeric Materials: Structure, Formation, Properties, and Application</b>	<b>97</b>
	<i>Monika Wysocka-Zolopa and Krzysztof Winkler</i>	
1.	Introduction .....	98
2.	Fullerenes Incorporated into a Conductive Polymeric Network.....	101
2.1	Doping conducting polymers with fullerene moieties .....	101
2.2	Properties of conducting polymers with incorporated fullerene moieties .....	106
3.	Homopolymers of Fullerenes .....	118
4.	Polymers Containing Fullerene Moieties Covalently Linked to the Conductive Polymeric Backbone.....	131
4.1	Structure, electrochemical and photochemical properties of oligomers with covalently attached fullerene moieties.....	132
4.2	Synthesis, properties and application of fullerene containing polymeric “double cables” .....	137
5.	Main-chain Fullerene Polymers .....	165
5.1	Fullerenes incorporated into an organic polymeric backbones....	165

5.2. Fullerene-epoxide-based polymers.....	166
5.3. Two-component polymeric materials containing fullerenes and transition metal complexes.....	177
5.3.1. Chemical synthesis in solution .....	177
5.3.2. Electrochemical synthesis.....	181
5.3.3. Electrochemical properties.....	186
5.3.4. Potential applications.....	197
6. Conclusions and Outlook .....	210
References .....	211

**Chapter 4 Carbon Nanomaterials for Electrochemical Sensing** **225**  
*Paolo Bertoncello*

1. Introduction .....	225
2. Luminescent Carbon Nanocrystals .....	226
3. Graphene and Graphene Composites .....	226
4. Graphene Nanocrystals .....	241
5. Carbon Nanotubes.....	245
Conclusions.....	259
References .....	260

**Chapter 5 Iron Oxide Nanoparticles-Graphene Composite Materials: Synthesis, Characterization and Applications** **265**  
*Gitashree Darabidhara, Priyakshree Borthakur,  
 Manash R. Das, Sabine Szunerits  
 and Rabah Boukherroub*

1. Introduction .....	266
2. Synthesis of graphene oxide (GO).....	268
3. Synthesis of Fe <sub>3</sub> O <sub>4</sub> /Fe <sub>2</sub> O <sub>3</sub> NPs-GO/rGO composites and their characterization.....	269
3.1. <i>In situ</i> synthesis .....	270
3.1.1. Hydrothermal reduction.....	270
3.1.2. Thermal reduction.....	276
3.1.3. Chemical reduction .....	282
3.1.4. Co-precipitation method .....	284
3.1.5. Ultrasonication.....	285
3.1.6. Microwave-assisted synthesis.....	287
3.2. <i>Ex situ</i> synthesis .....	288
3.2.1. Covalent interactions.....	288

3.2.2. Non covalent interactions.....	293
4. Applications .....	295
4.1. Catalysis.....	295
4.2. Photocatalysis.....	296
4.3. Application in waste water treatment.....	298
4.4. Sensing applications .....	298
4.5. Application as electrode materials in supercapacitors.....	301
4.6. Application as lithium ion battery anode .....	302
4.7. Biomedical applications .....	302
5. Conclusion and perspectives.....	304
References .....	305
 <i>Cumulative Index of Volumes 7 and 8.....</i>	 311
