Contents

Preface	v
1 Simple Ideas about Semiconductors	1
1.1 Definition and Importance of Semiconductors	1
1.2 A Chemical Approach to Semiconductors	3
1.3 Quantum States of a Perfect One-Dimensional Crystalline Solid	7
2 Quantum States of a Perfect Semiconductor	16
2.1 Quantum States of a Three-Dimensional Crystal	16
2.2 Dynamics of a Bloch Electron. The Crystal Momentum	23
2.3 Metal, Insulator, Semiconductor	27
2.4 Theoretical Determination of Band Structure	30
2.5 The True Band Structure	41
2.6 Experimental Study of Band Structure	43
Appendix 2.1 Matrix Element of a Periodic Operator between Two Bloch States	49
Appendix 2.2 Symmetries of the Band Structure	52
Appendix 2.3 Band Structure of Column IV Elements Calculated by the LCAO Method	54
Appendix 2.4 The $\mathbf{k} \cdot \mathbf{p}$ Method	61
3 Excited States of a Pure Semiconductor and Quantum States of Impure Semiconductors	65
3.1 The Hole Concept	65
3.2 Impurities in Semiconductors	71
3.3 Impurity Bands	76
Appendix 3.1 Problems on Cyclotron Resonance in Silicon	78
Appendix 3.2 Quantum Wells and Semiconducting Superlattices	84
Appendix 3.3 Amorphous Semiconductors	88
4 Statistics of Homogeneous Semiconductors	91
4.1 Occupation of the Electron Levels	91

4.2	Hole Occupation	92
4.3	Determination of the Chemical Potential	92
4.4	Statistics of Pure or Intrinsic Semiconductors	94
4.5	Statistics of a Semiconductor Containing Impurities: The Notion of Majority and Minority Carriers	98
4.6	Compensated Semiconductor at Intermediate Temperature	102
4.7	Semiconductor at Low Temperatures	105
4.8	Application: The Semiconducting Thermometer	107
4.9	Growth of Pure Crystals	108
	Appendix 4.1 Occupation Number of a Donor Level	112
	Appendix 4.2 Problem: Substrates for Microelectronics	115
5	Transport Phenomena in Semiconductors	121
5.1	Introduction	121
5.2	Drude's Model of Conductivity and Diffusion	122
5.3	Semiclassical Treatment of Transport Processes	128
5.4	The Mobility of Semiconductors	136
	Appendix 5.1 Problems on the Hall Effect and Magnetoresistance of Semiconductors in the Drude Model	140
6	Effects of Light	147
6.1	Light Absorption by Semiconductors	147
6.2	Recombination	156
6.3	Photoconductivity and its Applications	162
	Appendix 6.1 Quantum System Submitted to a Sinusoidally Varying Perturbation	167
	Appendix 6.2 Calculation of the Radiative Recombination Probability	171
	Appendix 6.3 Semiconducting Clusters for Non-Linear Optics	175
7	Carrier Injection by Light	179
7.1	Basic Equations for Semiconductor Devices	179
7.2	Charge Neutrality	180
7.3	Injection or Extraction of Minority Carriers	181
	Appendix 7.1 Charge Quasi-Neutrality	184
	Appendix 7.2 Problems on Photoexcitation, Recombination, and Photoconductivity	187
8	The p-n Junction	194
8.1	Introduction: Inhomogeneous Semiconductors	194
8.2	The Equilibrium p - n Junction	196
8.3	The Non-Equilibrium Junction	204
	Appendix 8.1 Problem: Non-Stationary p - n Junctions and their High-Frequency Applications	218

9 Applications of the p-n Junction and Asymmetrical Devices	230
9.1 Applications of p - n Junctions	230
9.2 The Metal-Semiconductor Contact in Equilibrium	234
9.3 Non-Equilibrium Metal-Semiconductor Junction	238
9.4 The Semiconductor Surface	241
9.5 Photoemission from Semiconductors	243
9.6 Heterojunctions	245
10 The Principles of Some Electronic Devices	247
10.1 The Junction Transistor	247
10.2 The Field-Effect Transistor	252
10.3 An Application of the MOSFET: The Charge-Coupled Device (CCD)	257
10.4 Concepts of Integration and Planar Technology	258
10.5 Band Gap Engineering	262
10.6 Physical Limits in Digital Electronics	264
Appendix 10.1 Problems on the n - p - n Transistor	268
Appendix 10.2 Problems on the Junction Field- Effect Transistor	277
Appendix 10.3 Problems on MOS (Metal-Oxide- Semiconductor) Structure	286
Values of the Important Physical Constants	301
Some Physical Properties of Semiconductors	303
Bibliography	305
Index	307
